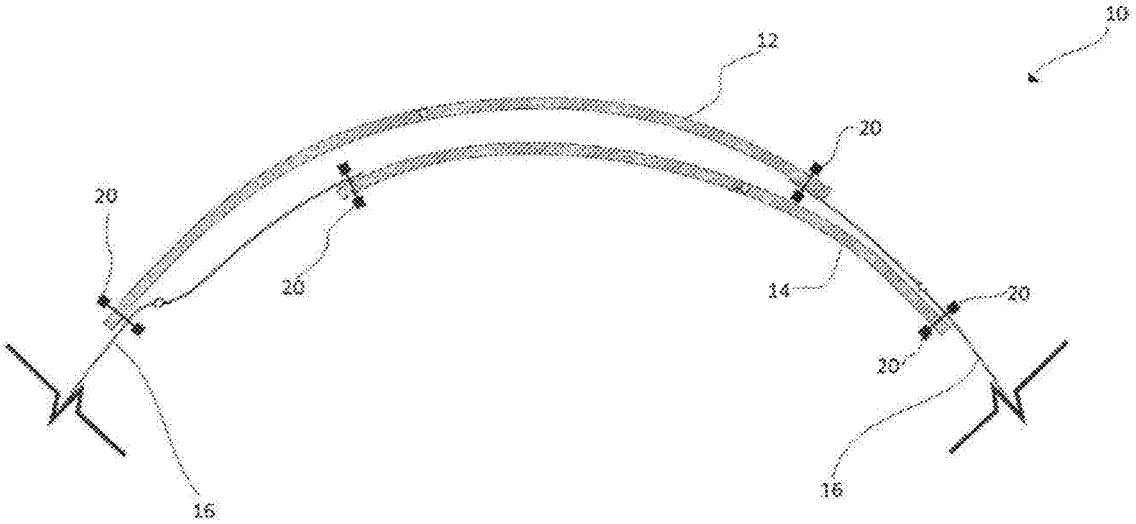
(57) **ABSTRACT**


The present disclosure describes a protective stretchable material and a garment made therewith. The protective stretchable material comprises a first protective fabric, and a second protective fabric partially superposing the first protective fabric. The protective stretchable material further comprises a stretchable structure. The first and second protective fabric are affixed to the stretchable structure in such a manner as to allow movement of the first protective fabric with respect to the second protective fabric while remaining partially superposed upon stretching of the stretchable structure.
