200
Receiving an input signal associated with an event
210
Determining a source of the event and selecting the control signal based on the determination
220
Outputting a control signal to an actuator coupled to a handheld communication device
230
Providing a collection of haptic effects, each associated with a distinct control signal
240
Receiving a mapping between an event of interest and one of the haptic effects
250
Compiling the mapping into a haptic lookup table
260
