Configure UE with first CSI process for non-UE-specific measurement signals
405
Configure UE with second CSI process for UE-specific measurement signals and with measurement restrictions in time, frequency, or both time and frequency
410
Receive scheduling for non-UE-specific measurement signals
413
Receive non-UE-specific measurement signals (e.g., CSI-RS and IMR) from base station for the first CSI process
415
Determine CSI for the first CSI process
418
Transmit CSI to base station for the first CSI process
420
Receive scheduling for UE-specific measurement signals (e.g., CSI-RS and IMR) for second CSI process
437
Receive UE-specific CSI-RS and IMR for second CSI process from base station
440
Determine CSI for the second CSI process based on the measurement restrictions in time, frequency or both time and frequency
443
Transmit CSI to the base station for the second CSI process
445
Receive scheduling for precoded information to be transmitted from base station
457
Receive precoded information from base station using (e.g., massive) MU-MIMO
460
