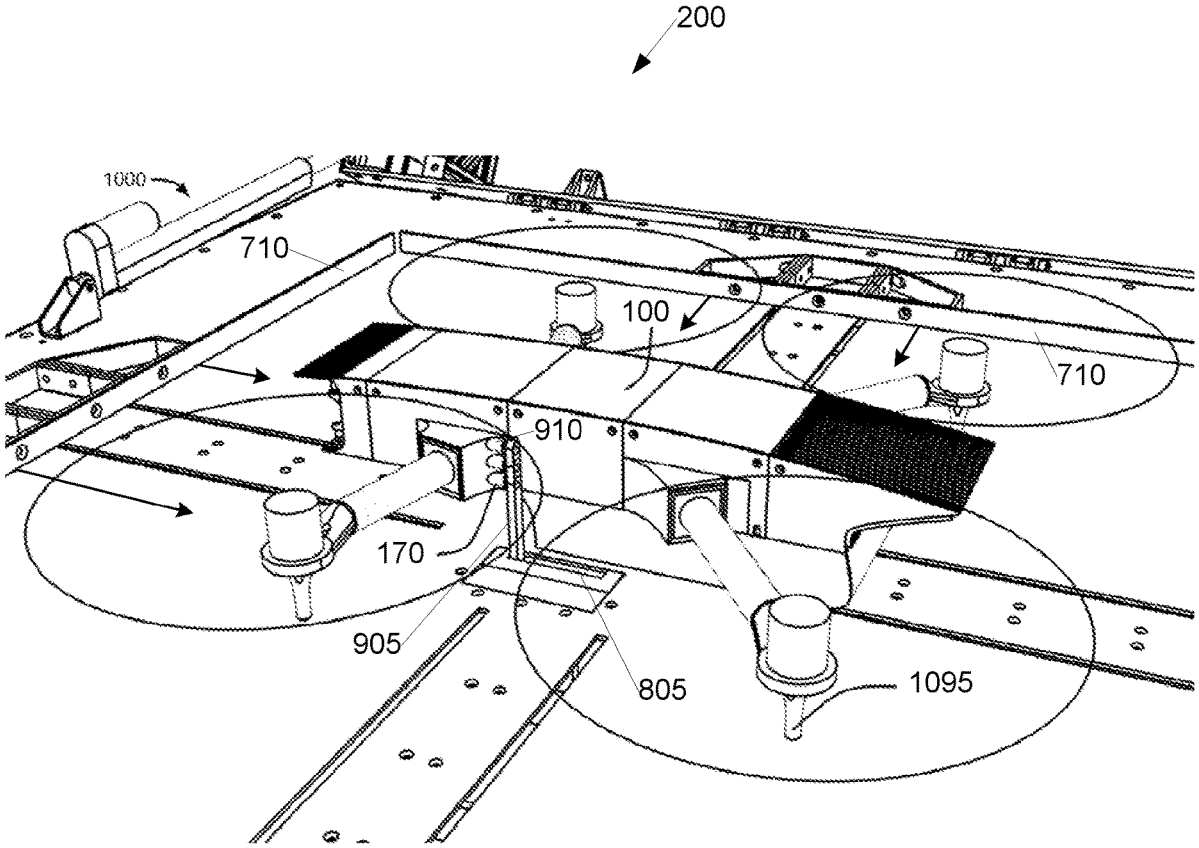
(57) **ABSTRACT**


The drone implemented border patrol solution is projected to be more effective at preventing successful border penetrations over very long distances than any attempted solution. It requires functionally zero infrastructure investment. It can be deployed in six months or less and it costs less than $100,000 a mile to implement (vs. 15 million a mile for a physical wall, or 4 million a mile for a virtual fence (a 97% price reduction)).
