1302
Determine a bead arrangement of a first bead apparatus and a second bead apparatus
1304
Send information indicative of the bead arrangement to a separate apparatus
1306
Receive a representation of an image, the image being based on at least one operational circumstance
1308
Determine a first part of the representation based on a position of the first bead apparatus
1310
Cause display of the first part of the representation by the first bead apparatus
1312
Determine a second part of the representation based on a position of the second bead apparatus
1314
Cause display of the second part of the representation by the second bead apparatus

FIG. 13
