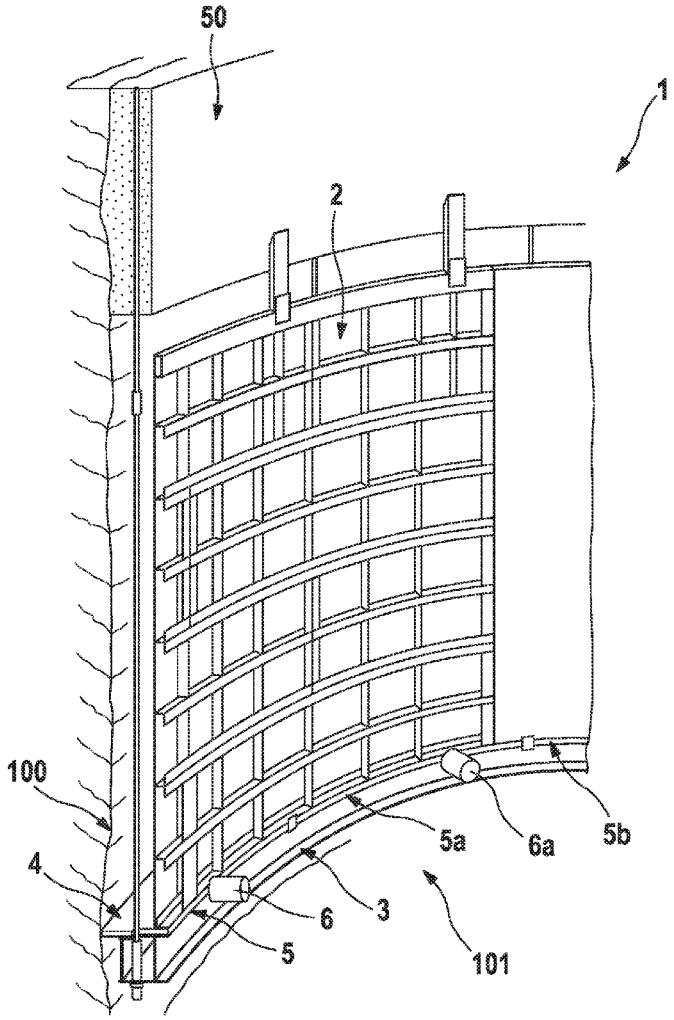
(57) **ABSTRACT**


The invention relates to a device (**1**) for producing a hollow-cylindrical concrete lining (**50**) on shaft walls (**100**) of vertical shafts (**101**), having at least one shuttering element (**2**) which is radially spaced from the shaft wall (**100**) and forms a concrete shuttering, a supporting ring (**3**) at the lower end of the shuttering element (**2**), and a sealing assembly (**4**) in the region of the supporting ring (**3**) to seal the concrete shuttering relative to the shaft wall (**100**), wherein the sealing assembly (**4**) is formed by a plurality of drawers (**5**, **5***a*, **5***b*) which can be extended radially against the shaft wall (**100**).
