(57) **ABSTRACT**

A system and method for interacting with at least one display screen of a multi-component display is disclosed. A system includes a first display screen operable to display a first image, wherein the first display screen includes a first plurality of pixels. A second display screen is operable to display a second image, wherein the second display screen includes a second plurality of pixels, wherein the second display screen overlaps the first display screen, wherein the second display screen is further operable to display the second image simultaneously with the display of the first image, and wherein a portion of the first image is viewable through the second display screen. A user interface is operable to enable interaction with at least one display screen selected from a group consisting of the first display screen and the second display screen.
