Get byte code execution statements for node
630
What is node type?
632
Shape
VcShapeNode
Data source
(VcQueryDataSource)
other node types
Create shape creation statement, VcStmtCreateShape
634
Create statement to begin properties, VcStmtBeginProperties
636
Get first property
638
Create statement to set property, VcStmtSetProperty
640
More properties?
642
Y
N
Get next property
644
Create statement to commit properties, VcStmtEndProperties
646
Get query and generate SQL (parameterized)
648
Determine column names to be used as referenceable identifiers
650
Create statement to create query, VcStmtCreateQuery
652
Get first parameter
654
Create statement to set query parameter value, VcStmtSetQueryParameter
656
More parameters
658
Y
N
Get next parameter
660
Create statement to execute query
662
Exit
664
