(57) **ABSTRACT**

Methods, systems, and apparatus are provided for displaying game related information on gaming machines. The gaming machines include two or more game presentation devices such as rotating reels, video display screens, touch screens, etc. One or more of these game presentation devices can be moved into and out of position with respect to other game presentation devices. This may allow, among other things, flexibility in presenting different types of games or different game features within a single game.
