(57) **ABSTRACT**

A gaming apparatus may include a housing, a display unit capable of generating video images, a value input device, a controller operatively coupled to the display unit and the value input device, and a panel at least partially overlaying the display unit. The housing may include a first opening and a second opening. The display unit may be positioned relative to the housing so that a first portion of the display unit is visible through the first opening and the second portion of the display unit is visible through the second opening. The controller may comprise a processor and a memory, and may be programmed to allow a person to make a wager, to cause a first video image to be generated on the first portion of the display unit and a second video image to be generated on the second portion of the display unit, and to determine a value payout associated with an outcome of the game.
