(57) **ABSTRACT**

(73) Assignee: **MOVE MOBILE SYSTEMS, INC.**, Los Altos, CA (US)

Mobile devices are described, along with related services, systems, and methods. These devices include displays with pixel dimensions and pixel densities in ranges that are chosen to allow users to enjoy a more intuitive and more "desktop-like" Web or multi-media experience compared to other devices, while still enabling the devices to be pocket-size. Also described are devices with touch sensitive areas on the edges or back that let users efficiently and intuitively control some behaviors of the devices by touching the touch sensitive areas in certain ways. Embodiments of the present invention reduces the need for mechanical controls, which enables keeping the frame around the device's display unusually narrow, thereby permitting larger displays without increasing the overall sizes of the devices.
