Related U.S. Application Data

(60) Provisional application No. 60/757,698, filed on Jan. 10, 2006.

A labeling system comprises a wall enclosing a space and a container for holding a retractable label, the container laterally disposed in relation to the space. The retractable label is configured to extend out of and retract into the container. In some embodiments, the wall at least partially defines a container cap. In other embodiments, the wall at least partially defines another container for holding material, such as, e.g., material of medicinal utility.
