

- 22.** A method for operating a slot machine, comprising:
causing at least one display device of a slot machine to rotate about an axis,
wherein the at least one display device has a plurality of angular surface locations, and
wherein the at least one display device is operable to display at least one indicium defining an outcome of a game, each of the at least one indicium being displayed at a respective angular surface location;
determining an angle of rotation of the at least one display device, wherein a first angular surface location is not viewable from a predetermined viewing perspective when the at least one display device is rotated to the angle of rotation; and
changing, when the at least one display device is rotated to the angle of rotation, the at least one indicium displayed at the first angular surface location from a first indicium to a second indicium.
- 23.** A method, comprising:
causing at least one display device of a slot machine to rotate about an axis,
wherein the at least one display device includes a plurality of surface locations, each surface location operable to display a respective indicium of a plurality of available indicia;
determining a particular indicium of the plurality of indicia to be displayed along a payline of the slot machine when the at least one display device has stopped rotating;
determining, based at least on a velocity with which the at least one display is moving, a particular surface location that will be displayed along the payline when the at least one display device stops rotating; and
causing the determined indicium to be displayed at the particular surface location.
- 24.** The method of claim 23, wherein the particular surface location is intermittently viewable from a viewing perspective, and wherein causing comprises:
causing the determined indicium to first be displayed at the particular surface location when the particular surface location is not viewable from the viewing perspective.
- 25.** A slot machine, comprising:
at least one display device operable to display at least one indicium defining an outcome for a game,
wherein a left edge of the display device defines at least a portion of a left base of a cylindrical shape and a right edge of the display device defines at least a portion of a right base of the cylindrical shape.
- 26.** The slot machine of claim 25, wherein the left edge defines at least a portion of a surface simulating a reel shape and the right edge defines at least a portion of the surface simulating the reel shape.
- 27.** The slot machine of claim 25, further comprising:
a first rim located along the left edge, and
a second rim located along the right edge.
- 28.** The slot machine of claim 27, further comprising:
means for moving the first rim and the second rim.
- 29.** The slot machine of claim 28, wherein the means for moving comprises:
means for moving the first rim and the second rim in a curvilinear motion.
- 30.** The slot machine of claim 29, wherein the slot machine further comprises:
an shaft; and wherein
the means for moving comprises:
means for moving the first rim and the second rim about the shaft.
- 31.** The slot machine of claim 28, wherein the means for moving comprises:
means for moving the first rim and the second rim relative to the at least one display device, the at least one display device remaining stationary during the movement of the first rim and the second rim.
- 32.** The slot machine of claim 31, wherein the means for moving comprises:
means for moving the first rim and the second rim in a synchronous manner such that the first rim and the second rim
simultaneously begin moving,
simultaneously stop moving, and
each respectively move at an equal velocity.
- 33.** The slot machine of claim 27, wherein at least one of the first rim and the second rim is made of a mirrored surface.
- 34.** The slot machine of claim 33, further comprising:
a circular surface, the circular surface being reflected in the mirrored surface of at least one of the first rim and the second rim and further being located in a location not visible to a player of the slot machine; and
means for moving the circular surface relative to the mirrored surface, the mirrored surface reflecting the moving circular surface such that the mirrored surface appears to be moving.
