(57) **ABSTRACT**

In at least one embodiment, the invention includes a system and method for creating a longitudinal medical record for an injured being. In at least one embodiment, the system includes a plurality of mobile computing devices. Each mobile computing device preferably includes at least one user interface wherein the user interface includes means for allowing a user to select an injury, select a location of the injury on an electronic body diagram, create a report, and provide a proposed treatment plan. The mobile computing device preferably further includes means for transmitting information to a computer network, means for receiving information from the computer network, an electronic information carrier (EIC) slot, a medical device interface, and a memory.
