

The textbox output remains independent of this modification and the event is processed as normal if other handlers were present.

#### 3.4.2 Page Class properties

5 The Page also contains the following properties which are available to the script at runtime:

SML - a name/value pair for the ID of the control and it's associated SML returned by recognition.

.0 SpokenText - a name/value pair for the ID of the control and it's associated recognized utterance

Confidence - a name/value pair for the ID of the control and it's associated confidence returned by the recognizer.

#### .5 4 RunSpeech Algorithm

---

The RunSpeech algorithm is used to drive dialog flow on the client device. This may involve system prompting and dialog management (typically for voice-only dialogs), and/or processing of speech input (voice-only and multimodal :0 dialogs). It is specified as a script file referenced by URI from every relevant speech-enabled page (equivalent to inline embedded script).

Rendering of the page for voice only browsers is done in :5 the following manner:

The RunSpeech module or function works as follows

(RunSpeech is called in response to document.onreadystatechange becoming "complete"):
