

collecting time information at the time of creating the post;  
and  
wherein the plurality of context descriptor values represent  
a range of sequentially ordered positive to negative con-  
notations.

**19.** A system for publishing an online post from a device  
comprising:  
a post content system of the device that populates post  
content;  
a single-interaction interface that is the input of the device  
for a context descriptor selector and a post submission  
button; and

a post database that hosts posts and is in communication  
contact with the device during post submission.

**20.** The system of claim **19**, wherein the post content sys-  
tem includes:

a location unit that gathers location information;  
a clock that provides local time to the post;  
an account manager that verifies account credentials; and  
wherein the single-interaction interface is a scalar value UI  
element of the device where the value is mapped to a  
unique context descriptor.
