(63) Continuation of application No. 09/921,209, filed on Aug. 3, 2001.

A hybrid slot machine, controlled by a processor in response to a wager, comprises a video display and a generally flat panel mounted over the video display. The video display is operable to depict a plurality of symbol-bearing reels that are rotated and stopped to place symbols on the reels in visual association with at least one pay line. The flat panel forms one or more transmissive reel windows overlying and revealing the respective reels shown on the video display.
