

circuitry for displaying on one or more portions of the bendable display containing electronic device in response to the comparing stored data with the first information associated with one or more conformations of one or more portions of one or more regions of the bendable display containing electronic device.

81. The system of claim **42**, wherein the circuitry for controlling display of one or more portions of the bendable display containing electronic device regarding display of second information in response to the information associated with the one or more sequences of two or more conformations of the one or more portions of the one or more regions of the bendable display containing electronic device comprises:

circuitry for selecting one or more of the classifications of the second information having one or more classifications; and

circuitry for displaying on one or more portions of the bendable display containing electronic device in response to the selected one or more of the classifications of the second information having one or more classifications

82. The system of claim **42**, wherein the circuitry for controlling display of one or more portions of the bendable display containing electronic device regarding display of second information in response to the information associated with the one or more sequences of two or more conformations of the one or more portions of the one or more regions of the bendable display containing electronic device comprises:

circuitry for selecting other than one or more of the classifications of the second information having one or more classifications; and

circuitry for displaying on one or more portions of the bendable display containing electronic device in response to the selected other than one or more of the classifications of the second information having one or more classifications.

83. A system comprising:

means for obtaining information associated with one or more sequences of two or more conformations of one or more portions of one or more regions of a bendable display containing electronic device; and

means for controlling display of one or more portions of the bendable display containing electronic device regarding display of second information in response to the information associated with the one or more sequences of two or more conformations of the one or more portions of the one or more regions of the bendable display containing electronic device.

84. A system comprising:

a signal-bearing medium bearing:

one or more instructions for obtaining information associated with one or more sequences of two or more conformations of one or more portions of one or more regions of a bendable display containing electronic device; and one or more instructions for controlling display of one or more portions of the bendable display containing electronic device regarding display of second information in response to the information associated with the one or more sequences of two or more conformations of the one or more portions of the one or more regions of the bendable display containing electronic device.
