(73) Assignee: **International Business Machines Corporation**, Armonk, NY (US)

The present invention provides a notebook PC with a monitor that enables a user to have better handling of the PC and viewing of the display of the device when using the PC. A PC includes a monitor and a main unit that are connected to each other by an arm through a first hinge portion and a second hinge portion. In the present invention, the angle of tilting of the monitor is constantly maintained even when the position in height of the monitor is changed.
