(57) **ABSTRACT**

A multi view display (5) provides different viewing angles for different images (3, 4). The display (5) may comprise a single screen on which two or more images (3, 4) are interleaved, or a number of overlapping screens on which respective images (3, 4) are displayed. Viewing manipulation means such as privacy films or lenticular arrays control the viewing angles for each image (3, 4). The multiview display (5) may be used in a vehicle, to simultaneously display a movie (3) to a passenger (1), and a navigation image (3) to a driver (2).
