(57) **ABSTRACT**

A computing device is provided that includes a display comprising a plurality of discrete elements. A memory is used to store a data collection of paginated content. A processor of the computing device is configured to retrieve each of the pages from the memory. The processor signals the display to individually present each of the pages. A sensor device is coupled to the processor. The sensor device is deflectable to signal the processor a deflection value that causes the processor to sequentially present at least portions of multiple pages on the display.
