(57) **ABSTRACT**

The invention relates to a display system which comprises a display screen (101) for displaying a graphical representation. The surface of the display screen has relief (103, 104) in order to provide tactile and/or visual guidance to the user. The display system according to the invention comprises a relief generator for dynamically generating the relief (103, 104) on the display screen. It is thus achieved that the relief can be changed dynamically in accordance with the graphical output of the current application.
