

combined, can be integrally constructed. In this case, there may be a case that the unit integrally constructed can be wholly exchanged, and this case is preferable since time and labor for decomposing work or assembling work thereof can be omitted and maintenance work can be improved. Further, if parts and construction can be commonly used in the unit, this case is preferable since it can contribute to cost reduction. Of course, if the illumination means commonly utilized for the common illumination means is included in the unit, the same effect similar to the above can be expected.

[0097] Further, the beneficial state includes: a state that a predetermined combination (for example, replay, BB, RB, small combination, single bonus and the like) is materialized; free game; a state that information necessary for the player to favorably advance the game is notified; a state that probability to get internal winning of a predetermined combination is high; a state that winning of a predetermined combination is materialized with high probability; winning of a predetermined combination or a predetermined combination carried over is permitted to materialize with high probability; so-called "challenge time" that the reels are basically stopped based on the operation timing of the stop buttons by the player; small combination; medium combination; big combination; combination (state that so-called "symbol start opening" (symbol variable movement is started when a ball enters in the symbol start opening) is opened or enlarged; so-called "probability changing state", so-called "time shortening state"); or combination of the above states. Here, the small combination, the medium combination and the big combination concern with a state that so-called "big winning opening" is opened in the so-called Japanese Pachinko gaming machine.

[0098] In the embodiment, though it is explained by using the internal winning combination as the information concerning with games, the present invention is not limited to this. For example, the beneficial state can be utilized as the information concerning with games. And as the information concerning with games, it can be utilized the information of the number that a predetermined winning combination (for example, BB, RB, single bonus, small combination, replay) is materialized among the number that the predetermined winning combination is internally won.

[0099] Further, as the mode of "restoration pattern", it can be utilized "mode that notification is done", "mode that notification is not done" or "mode that it is notified the information concerning with another information (winning combination) other than the information indicated by the information concerning with games (so-called "erroneous notification"). For example, in a case that the information concerning with another winning combination other than the winning combination indicated by the information of the internal winning combination, it can be added to games the interest to anticipate whether the notified winning combination is the winning combination indicated by the information of the internal winning combination. And this mode can be distinguished by "letter's color" or "letter's font" and the like.

[0100] And when the internal winning combination determination means determines a predetermined combination (for example, bonus) as the internal winning combination, one or plural or all of the illumination means included in the common illuminations means can be turned off. For

example, the LED lamps **29** arranged for each of the reels **3L**, **3C**, **3R** can be turned off every the operation button corresponding thereto is operated or every the operation button other than the above operation button is operated. Based on the above constructions, interest for games increases. And the forward illumination means (the fluorescent lamps **38a**, **38b**) can be provided for each of the symbol display parts (the reels **3L**, **3C**, **3R**).

[0101] Further, one or plural or all of the illumination means included in the common illumination means can be constructed so as to variably display. For example, still images or moving images can be displayed on the first display means (reel sheet) by changing the turning on mode of the LED lamps **29** or light colors emitted therefrom or by continuously changing those. And self-emitting type plasma display, organic EL display and the like may be adopted as the illumination means (one example of the third illumination means), thereby images can be displayed on the first display means. By this constructions, interest for games increases.

[0102] In a case that the special game result (for example, the symbol combination indicating that bonus winning is materialized) is displayed on the first display means or the second display means, it can be provided the special gaming state producing means that the beneficial state for the player is displayed thereon. And both the special gaming state producing means and the second display means can be formed on single control circuit board. And the gaming state can be displayed by superimposing the images displayed on the first display means and the images displayed on the second display means. Further, based on the trigger that a predetermined state is realized, the effect display on the second display means can be done so as to avoid the specific symbols stopped and displayed on the symbol display part or so as to superimpose the specific symbols. If the gaming state is displayed by the superimposed images, the beneficial state for the player may be produced with high probability in comparison with the case in which the superimposed images is not displayed. Thereby, it can include the effect that the player's expectation increases, in excess of the previous case. Thus, such effect can contribute to increase of interest.

[0103] In the embodiment, though the start lever **10** is adopted as the game start instruction means, the present invention is not limited to this. For example, the BET switch **5**, the medal insertion slot **6**, the medal sensor **6S** or the start switch **10S** can be adopted.

[0104] The display includes: display by the sense of sight, display by the sense of hearing, notification by the sense of smelling, turning on of the lamps or combination of those. The display mode includes: colors, patterns, shapes (outline shapes, interior shapes) and the like. And the game result can be displayed after operation of the game start instruction means or the game result leading means.

[0105] In the embodiment, though the above mentioned LED drive circuit is utilized as the display control means for a plurality of the ornamental lamps, the LED lamps and the fluorescent lamps, each of which is arranged in the cabinet, the present invention is not limited to this. Turning on control of the LED lamps may be conducted by another display control means. In this case, for example, in turning on control of the LED lamps, electric power may be pro-
